SOLUTIONS BY SOLVE »»

**Bearings Limited is now part of Solve Industrial Motion Group.**

## **Who is Solve?**

Solve Industrial Motion Group (Solve) is a solutions-focused manufacturer in the bearings and power transmission components market. Formed in 2020 as a result of the consolidation of P.T. International, IPTCI Bearings and LMS Bearings, Solve has grown to include MasterDrive, SPB-USA, SST Bearing Corporation, and now, Bearings Limited and its line of Tritan Precision Power Transmission Components.

## **What does the acquisition mean for me?**

Moving forward, Bearings Limited will now operate as TRITAN, a product brand in the Solve portfolio. This means, you have access to a wider selection of products and categories to choose from, a stronger supply chain, and an enhanced customer experience from a larger team of customer service representatives.

In the background, we're working with Solve to implement solutions to help strengthen our inventory, pricing and distribution systems via a single software platform and website. Short of some minor logo changes to your order acknowledgements, packing slips and invoices, it's "business as usual." In cases where we are fulfilling multiple Solve brands, you will see those brands identified next to the item as well.

## **What does the acquisition mean for TRITAN?**

Being part of Solve Industrial Motion Group means TRITAN can continue to invest in product development, distribution solutions and customer service with the support of a partner committed to adding value through the latest technology, shared corporate services and innovative thinking.

Our primary goal is to take care of our customers and continue with as little disruption as possible.

## **Still have questions or need more information?**
